

Enyrgy for Wellness Operators: The Economics

A new-category modality your members already need, with the unit economics to match.

The demand is already in your book

Vitamin D runs low in 77 percent of indoor adults. Your members already need this, and today they have no way to get it from you.

A category of one

No other modality delivers all three of vitamin D, nitric oxide, and serotonin in a 2 to 4 minute session. It sits alongside red light therapy rather than replacing it. About 90 percent of Enyrgy users run both.

How operators use it

As a draw to bring in new members, and as an incentive to upgrade members into higher tiers. Operators are charging \$49 to \$75 a month for access.

The economics

Commercial unit	\$8,950 · 78% gross margin
25 active users, at \$49/mo	\$14,700 / year
50 active users, at \$49/mo	\$29,400 / year
100 active users, at \$49/mo	\$58,800 / year

Payback on the unit in under 4 months at 50 active users.

Safe by design

25,000-plus sessions delivered with zero adverse events. The app reads each user's skin type, sets their personal dose, and ends the session automatically. Guided by a scientific advisory board that includes Dr. Bruce Hollis. Built in Phoenix, Made in USA.

What's included

The unit, the dosing-and-safety app, staff training (light, the app runs the session itself), and marketing support to launch it with your members.
