

Enyrgy Vitamin D Primal Light Platform

A Vitamin D light modality for your service line, and a retail line for your shop

The body makes its own Vitamin D from a two to four minute session of the right light, the same amount that would take two to four hours in mid day sun, without the burn or the aging. One session opens three pathways at once: Vitamin D, nitric oxide, and serotonin. The app reads each person's skin type, sets the dose, and ends the session on its own, so no one is watching a clock.

2.4x
more efficient than sunlight for Vitamin D, 2 to 4 minutes replaces 2 to 4 hours of sun

25,000+
sessions completed, zero burns and zero adverse events

Under 1%
return rate, against an industry norm of 5 to 10 percent

77%
of indoor adults run low on Vitamin D, the demand is already in your book

WHERE IT FITS

This is not a new category for you. You already run LED laser, infrared beds, and frequency and voltage. Your team and your patients already believe in light. This is simply the Vitamin D one, the light that raises a number you and your patients can watch on a lab draw.

Where supplements sit on your shelf, they are one lane. In published trials, about one in four participants were low responders to Vitamin D supplementation, so a capsule does not reliably move the number for everyone. This does, and your own blood work is the proof.

SAFETY AND CREDIBILITY

Sunlight is roughly 95 percent UVA. Enyrgy flips it: over 90 percent UVB, under 10 percent UVA. The app calculates each user's dose by skin type and shuts the session off automatically. 600 plus customers across five countries. Made in the USA in Phoenix, Arizona.

Our scientific advisory board includes **Dr. Bruce Hollis**, who has reviewed and endorsed the platform and is among the most cited Vitamin D researchers in the world, **Dr. Samantha Kimball**, who designed the dosing protocol behind every session, and **Dr. William Grant**, a global Vitamin D and UVB researcher.

TWO REVENUE LINES FROM ONE PLATFORM

In-clinic, patients add it as a modality at \$125 a month in your market. It also fits how your patients move through the center: those who are on-site a week and home for two can do sessions with you and take a unit home from your shop to hold their levels between visits.

In-clinic patients on the modality	Monthly	Annual
25 patients	\$3,125	\$37,500
50 patients	\$6,250	\$75,000
100 patients	\$12,500	\$150,000

The commercial unit is \$8,950, with payback in under three months at just 25 patients on the modality. Take-home units add about \$600 per device to your shop, a second margin line on top of the in-clinic recurring revenue.

A note on claims. Enyrgy is a wellness device and makes no medical claims. It raises and documents Vitamin D levels; every clinical conclusion belongs to your care team. Independent, peer reviewed research on Vitamin D status and immune function is available for your clinicians to review on their own terms.

Next step. We bring a unit and two of our people to Irvine, set it up, and let your team try it and see both the patient side and the numbers in person. No slides, just the platform itself.
